

Biohazard Response Kit (PD-BHK-01)

Positive solutions
for complex
requirements

The Proton Dynamics PD-BHK-01 provides users with the equipment required to safely contain, decontaminate and dispose of potentially infectious biological materials. Assembled by Proton Dynamics using carefully selected Custom Off the Shelf (COTS) components, the kit supports a rapid and effective response to biohazard incidents while helping minimise the risk of contamination and exposure. The kit can be customised to suit specific operational requirements, with individual components available separately to support replenishment and ongoing readiness.
